Test Report of Explosion Characteristics

Report ID: IEPI/Lycopodium/20151228

Sample name	Lycopodium	Supplier	Industrial Explosion Protection Institute, NEU	
Date of receiving sample	2012	Period of test	2015 / 12 / 28	
Sample preparation method	Standard sample: dried			
Sample characteristics	Yellow powder			
Test results				
Parameter	Value	Apparatus	Standard	
Water content /%	0	Vacuum drying chamber and balance		
Medium diameter/ μm	29.9	Malvern laser particle analyzer		
Explosion?	Yes	20L Spherical explosion test apparatus	ASTM E1226-12a	

The test results are only valid for the tested sample, and it is necessary to consult experts to interpret the explosion characteristics for risk assessment of the product in manufacturing, processing, transportation, and storage.

Appendix A. Size distribution

Table A. Particle size distribution of the standard sample

Sample name	Lycopodium		Supplier	Industrial Explosion Protection Institute, NEU				
Method	Determined by Malvern Master 2000 laser particle analyzer, dispersed by ethanol							
Sample preparation method			Standard sample					
Medium diameter	29.880 μm		Volume averaged diameter			30.781 μm		
Surface area averaged diameter			29.068 μm	Specific surface area		0.206 m^2/kg		
Particle size/ μm	Density distribution/ %	Cumulative distribution /%	Particle size / μm	Density distribution /%	Cumulative distribution /%	Particle size/ μm	Density distribution/ %	Cumulative distribution/ %
14.159	0	0	25.179	12.51	24.16	44.774	7.34	95.4
15.887	0.11	0.11	28.251	16.88	41.04	50.238	3.47	98.87
17.825	0.94	1.05	31.698	18.39	59.43	56.368	0.96	99.83
20.000	3.28	4.33	35.566	16.92	76.35	63.246	0.17	100
22.440	7.32	11.65	39.905	11.71	88.06	70.963	0	100

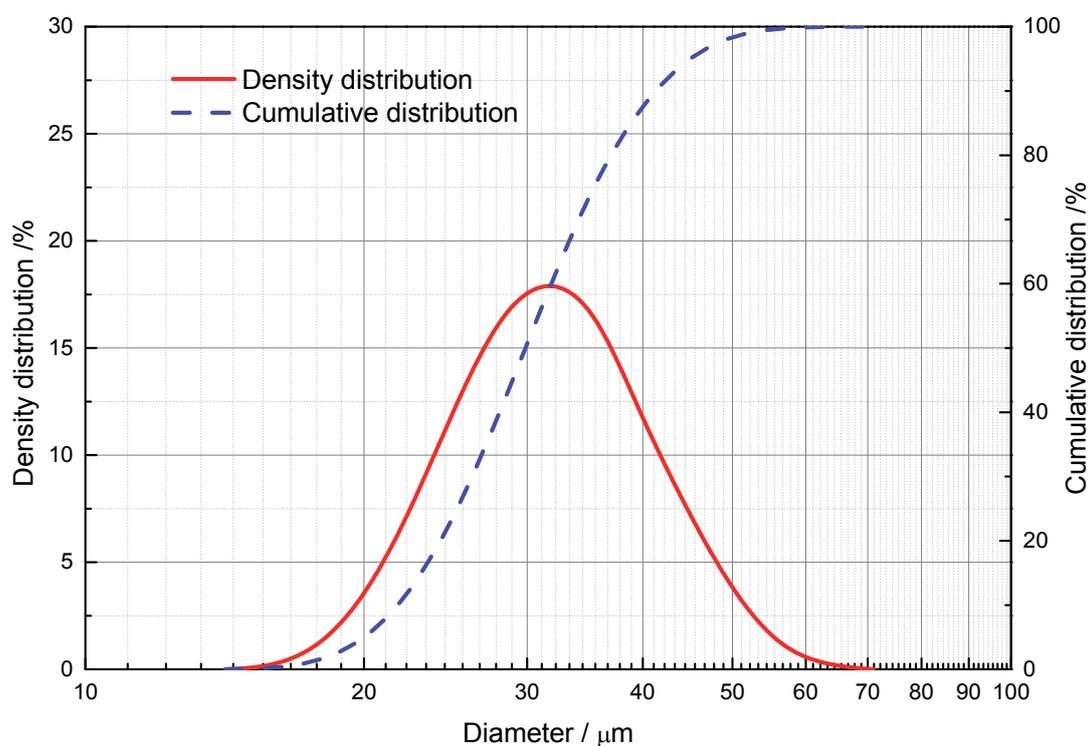

Figure A. Particle size distribution of the standard sample

Appendix B. Micrographs

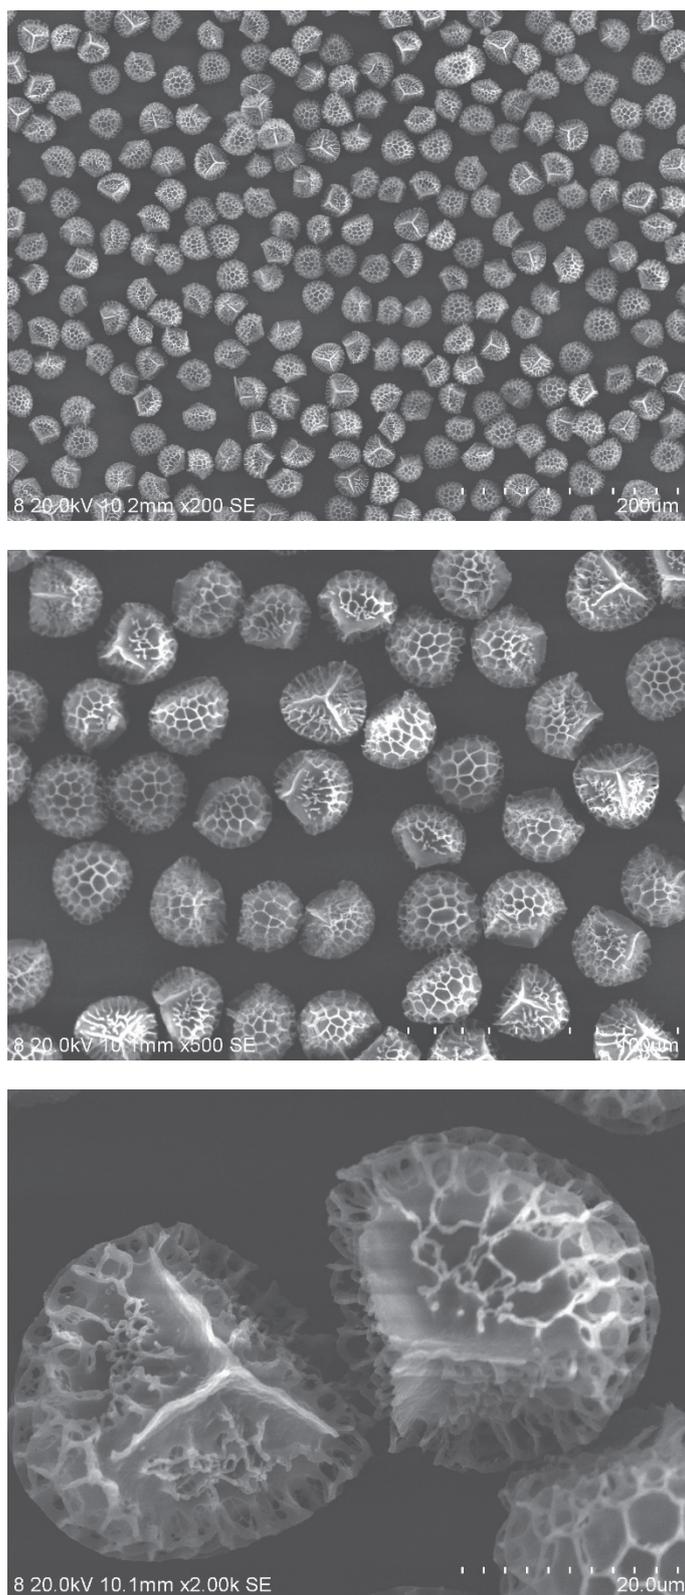

Figure B. Micrographs of the standard sample under scanning electronic microscope

Appendix C. Test records of go or no go

Table C. Test records of go or no go

Sample name	Lycopodium	Supplier	Industrial Explosion Protection Institute, NEU
Sample preparation method		Standard sample	
Test apparatus	20L spherical explosion vessel	Test standard	ASTM E1226-12a
Ignition energy	Pyrotechnical ignition, 10kJ	Ignition delay	60ms
Initial pressure	0MPa(g)	Initial temperature	18°C
Explosion?		Yes	
Test records			
Test No.	$C/(g/m^3)$	p_m/MPa	$K_m/(MPa \cdot m/s)$
1	1000	0.6145	13.1775

Appendix D. Pressure - Time Curve of go or no go
